DETAILED ACTION

Response to Amendment

1. This action is in response to the amendment E filed on 9/19/2000. Claims 21 and 23 have been canceled and claims 1-20, 22 and 24-65 are pending in the application.

Allowable Subject Matter

2. The indicated allowability of claims 1-20 and 22 are withdrawn in view of the newly discovered reference(s) to Miller. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

4. Claims 1, 4-5, 10-11, 24, 27-28 and 32-34 are rejected under 35 U.S.C. 102(e) as being anticipated by Miller (USP 5946647).

Regarding claims 1, 4-6, 10-11, 24, 27-28 and 32-34, Miller discloses a method of performing on an electronic document containing text information during communication session

Art Unit: 2664

which comprises the step of parsing (Fig 3, Ref 310 is a parser, Parse information for identifying telephone number, automatically dial the number without the user to enter telephone number), recognized the telephone number (Fig 4) and adding code to form a telephone icon such screen label, a graphic button, highlighted (adding code to create a highlighting for allowing the user to select and dial the telephone number from the computer, See Fig 6) for displaying on the GUI (See col 5, lines 5-50 and col 6, lines 8-25).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 2-3, 7-9, 12-20, 22, 25-26, 29-31 and 35-65 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miller (USP 5923736) in view of Shachar (USP 5764736).

Regarding claims 2-3, 7-9, 12-20, 22, 25-26, 29-31 and 35-65, Miller discloses a method of performing on an electronic document containing text information during communication session which comprises the step of parsing (Fig 3, Ref 310 is a parser, Parse information for identifying telephone number, automatically dial the number without the user to enter telephone number), recognized the telephone number (Fig 4) and adding code to form a telephone icon such screen label, a graphic button (adding code to create a highlighting for allowing the user to select

Art Unit: 2664

and dial the telephone number from the computer). However, Miller does not disclosed Parsing HTML code and transparently disconnecting from Internet session upon selection of the telephone number. In the same field of endeavor, Shachar discloses transparently disconnecting from the session upon the user clicks on the telephone icon to dial the number (Col 6, lines 1-14); reconnecting a data session when a telephone session is terminated (Col 6, 11-14); pattern-recognizer (See Fig 4a, 410); Internet capable telephone for recognizing a telephone number in the telephone tag "telephone icon" (Col 6, lines 24-26, col 5, lines 52-60); after interpreting the text information and adding code, a web browser will display a web page with all the information such as telephone number with graphic associated with it (Col 5, lines 42-47); storing a telephone number in the address book is well known in the art;

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to applying the method of transparently connecting or disconnecting the communication session as disclosed by Shachar into Miller's communication system. The suggestion/motivation would have been to prevent human error. Furthermore, the method of recognized pattern is well known in the art for recognizing the text telephone number.
